

STA 3024

Introduction to Statistics II

Fall 2010

Instructor: Maria Ripol
Department of Statistics, University of Florida

Wednesday August 25, 2010

- We reviewed some of the basic concepts covered in STA 2023: graphs, numerical measures of summary (mean and standard deviation), statistical inference (confidence intervals and significance tests).
- TA office hours are now posted on the syllabus – there are at least two hours of office hours each day of the week. Please make use of them if you have trouble with anything we're doing in class, or the suggested homework problems posted in e-learning, so you don't fall behind.
-

Monday August 23, 2010

- First class: Course Intro, go over the Syllabus. Please print the syllabus and keep it for your records. We will start with a brief review of STA2023, beginning next lecture. Please print this Statistical Inference table and Examples to bring to class next time. You will also need a copy of the t table and the Z table for upper and lower z-scores.
- Note-taker needed for a student with disabilities, \$75 for whole semester. If interested, please contact the instructor in class Wednesday.
- If you are enrolled in one of my two sections, you should now have access to the course webpage in e-learning-Sakai. Please log on using your gatorlink username and password, just to check that you can get in. There's not much to see there yet, just this page and the syllabus. Our first online quiz will probably start next week, after we're done with the review, and all the grades during the semester will be posted there. Problems?
 - If you are unable to access e-learning at all, you need to contact the CIRCA Help Desk (<http://helpdesk.ufl.edu>).
 - If you can access e-learning but you do not see STA 3024 listed as one of your courses, please make sure you logged on to SAKAI and not the old system. Also make sure you are officially registered for one of my sections (7660, 4433) - access to e-learning may take up to 24 hours after your registration is complete.
 - If you still can't see the course, email me (mripol AT stat.ufl.edu) and make sure you include the following information: Name, Gatorlink Username, UFID#.
