

Errors in Statistical Methods for the Social Sciences, 4th edition

My sincere thanks to anyone who points out errors they notice in this book.

Errors/typos found so far:

p. 52, Solution for Chapter 2 exercise 3k should be “ordinal”

p. 290, problem 9.10(b): the slope should be positive, that is, the prediction equation is $\hat{y} = 45,7 + 0.02414x$.
